

Specializing in Retail Control Systems Since 1967

Innovations in Self-Checkout

Margins are thin and seem to be getting thinner all the time. We see it every day. At STCR we have the tools and support to make a difference. When an independent grocer in NYC needed a scalable solution to maximize efficiency and customer service, STCR guided their team through implementation of a new POS system and installed several IBM self-checkout units.

IBM's successful and proven self-checkout hardware with groundbreaking new software technology offers a more rugged, flexible line of configurable solutions.

IBM's self-checkout configuration ranges from any-size-belted to standardized scan and bag with easy integration to various POS systems.

Our Support Desk of experts at our National Headquarters is ready 24 hours a days, 365 day a year to provide the top shelf customer service that has helped STCR's clients thrive for more than 40 years.

Cash and cashless models are available to suit individual retailer needs. Improved ergonomics speed up transactions.

Two- and three-bag options, carousel, as well as a belted model, are available for improved ease-of-use.

STCR's unmatched support team is available any time of the day or night to keep your store running smoothly.

Features

Benefits

<p>Ergonomic Design</p>	<p>This improved design helps enhance customer satisfaction and loyalty, while speeding the checkout process. All peripherals are located together, above the counter, which reduces the chance that a shopper will forget to take his or her change and improves transaction speed.</p>
<p>Industry-Leading POS Integration</p>	<p>CHEC software makes it easier to manage and maintain a highly reliable, available self checkout environment. In addition, the software gives you the flexibility to configure and extend functionality to address your unique needs. A high-level XML POS interface facilitates integration with a number of POS solutions.</p>
<p>Greater Flexibility</p>	<p>Flexible hardware options can help optimize throughput and service in a variety of store sizes and layouts. Front serviceability allows you to place units back to back, taking up less space in tight retail environments. Printer paper can be replaced without the need to unlock system doors and covers.</p>
<p>Robust Solution Manageability</p>	<p>Front end serviceable hardware systems and a comprehensive systems management solution enhance system uptime for around-the-clock store operations by proactively addressing issues before they disrupt operations.</p>
<p>Remote System Control</p>	<p>IBM Director and IBM Remote Management Agent software allows you to remotely or locally monitor, collect and filter availability and utilization thresholds—down to the device level—to improve IT staff productivity and establish a common control point for your store devices.</p>
<p>System Security</p>	<p>Fully configurable, three-level weight-based security has adjustable weight tolerances. Belted design separates scanning and bagging. Offers item-level, dimensional security for all belted lane solutions.</p>
