

Specializing in Retail Control Systems Since 1967

# Service and Reliability Are Within Reach

When a growing, family-owned grocery chain in Pennsylvania needed to increase efficiency without losing its trademark neighborhood atmosphere, STCR helped implement the right combination of tools to keep everyone smiling. As the store grew, IBM's SurePOS system not only grew with them, but helped them grow faster than they expected.

You don't need someone to sell you technology. Technology is just a set of tools. You need a genuine partner who knows the industry inside-out and can help you implement exactly the retail control system you need, without anything you don't need.

The comprehensive IBM SurePOS system is designed to help supermarkets optimize customer service and improve reliability at the POS. The IBM SurePOS system delivers excellent POS performance, outstanding reliability and a built-in promotions program.

Our Support Desk of experts at our National Headquarters is ready 24 hours a day, 365 days a year to provide the top shelf customer service that has helped STCR's clients thrive for more than 40 years.

Impeccable virus protection means higher security for your customers and a smoother running store.

Tough, retail-hardened design and construction for the real world environment protects your investment.

STCR's unmatched support team is available any time of the day or night to keep your store running smoothly.

### Features

### Benefits

<b>Flexible Spending Account (FSA) Support</b>	Provides the ability to accept shoppers' Flexible Spending Account cards for eligible items.
<b>Complex Password Support</b>	Supports complex passwords to enhance security at both the store controller and POS terminal.
<b>Enhanced Check MICR Operator Guidance</b>	Waits for a value card transaction to be approved before tender activation. You can also print a separate activation receipt on a value card sale.
<b>Cashier Birth Date Support</b>	Stores cashier birth date information to assist in complying with labor laws and restricted sales items laws.
<b>Virtually Tool-Free Design and Secure Front Access</b>	Allows access to all connectors from the front of the unit.
<b>4690 Operation System</b>	Provides a strong, secure platform for retail, with a single, convenient access point for POS. Advanced security features help protect store data and establish security-rich communications.
<b>Terminal Offline Feature</b>	Enables POS systems to continue scanning items and recording transactions, even if the store controller is unavailable.
<b>Built-in Power Management and Use of Recycled Plastics</b>	Environmentally friendly features minimize power consumption and support environmental initiatives.
<b>Smart-Card WIC</b>	EPS software supports the WIC program in Texas and New Mexico.
<b>14-Digit GTIN/RS</b>	Supports the Global Trade Identification Number/Reduced Space Symbology (GTIN/RSS) barcodes.
<b>Self-Checkout</b>	Supports integration with IBM Self-Checkout systems, which can help improve service, increase throughput and control costs.
<b>Integrated Customer Loyalty and Promotion Management</b>	Provides multiple options for building customer loyalty programs that reward targeted customers.
